**Kinetic Machine Development Expands Custom Machinery Design and Build
with New Facility in Rochester NY**

January 17, 2014 - Kinetic Machine Development LLC (KMD), a custom machinery designer and builder, announces the opening of a Regional Design and Build facility in Rochester, NY. This expansion represents KMD's commitment to bring localized engineering and machinery fabrication services to manufacturers in the Eastern United States.

KMD specializes in the design and manufacture of custom machinery for automated and semi-automated production processes. The latest technologies and lean manufacturing principals are incorporated into machinery designed to increase customers' manufacturing efficiencies. KMD is a wholly owned subsidiary of ORMEC Systems Corp. and the facility is co-located with the ORMEC manufacturing facility at 19 Linden Park, Rochester NY.

Dr. Edward Krasnicki, president of Kinetic Machine Development, states "This expansion brings a higher level of customer service and responsiveness for KMD customers in the Eastern US. A Design and Build facility in Rochester, NY puts us closer to our customers for activities such as design, review and project meetings and factory acceptance testing. With ORMEC company resources at the same location, we are in a unique position to combine this engineering expertise with KMD's machine building strengths."

With a highly educated workforce, a multitude of quality local contract vendors and quick airport access, Rochester NY is a perfect location for this KMD expansion.

About Kinetic Machine Development

Kinetic Machine Development, with headquarters located in St. Louis, MO specializes in custom machinery to support automated and semi-automated production processes. The primary markets served include: Medical, Pharmaceutical, Packaging, Automotive, Food, Consumer and General manufacturing.

KMD's history of providing machine building and systems integration services dates back to 1991. The company's expertise is in providing machine solutions that integrate technologies such as machine vision, servo motion control, and heat staking.

Services include machine design, control system design and programming, panel design, machine building and systems integration. KMD also provides machine design improvements, retrofits and upgrades for existing systems.
